BE30 – BE122:

* Double Disc Brake

1) For proper operation, the air gap between the damping plate and the pressure plate should not exceed the values shown. See Tech Note B-100 for more information on air gap and brake operation.

2) The brake disc requires a minimal thickness for proper operation. If the actual thickness is less than the value shown in the table above, the brake disc should be replaced.

BE Brake – Component Part Numbers
